SPOTLIGHTON...

STRAND LIGHTING'S PALETTE CONSOLES

Strand's family of Palette and Light Palette is a range of powerful, yet easy-to-program theatrical/moving light control systems that combines dimming and automated control like no other desk. Here are some details to give you a better idea of the difference in each console.

Classic Palette Basic is an entry level memory lighting console which supports 16 Submasters and 100 channels.

Classic Palette Memory supports 32 submasters and 150 channels.

Preset Palette is a memory lighting console with additional manual controls which supports 32 submasters and 100 channels. It is available in 32/64 or 48/96, which offers extended manual controls.

Sub Palette is ideal for live shows, TV production and tours. It offers 128 submasters for hands-on control of lights, groups, effects or just about anything.

Light Palette Classic delivers power in a traditional console with two timed split crossfaders and 12 combination submaster/playback faders. Four rotary encoders and a built-in touchpad along with sophisticated onscreen controls provide powerful moving light control.

Light Palette Live has 48 powerful submaster faders for exceptional hands-on control. Whether you are programming a television production or running live events on a regular basis, complete control is at your fingertips. Live offers ten pages of submaster assignments along with 12 playback faders for multiple cue stacks for quick access to all aspects of your show.

Light Palette VL builds on the Classic Palette and is the advanced moving light console. The VL adds 24 submasters and a 100 key direct action keypad. Its moving light effects generator and extensive fixture library mean that you can always get the most out of your moving light rig.

For indepth information and pricing, please call your favorite office, or email us at product@vls.com.
