Traditional connectors use screw terminals. Over time, these connections come loose. Lex-Loc connectors use cage clamp terminals, which use spring pressure, instead of screw terminals. The spring delivers a pre-determined amount of pressure and automatically adjusts to shifting strands.

YOUR GUIDE TO CONNECTORS

Which connector do you need? Use our guide below, or contact us at product@vls.com. We can help determine the right connector for your fixture.

Stage Pin Also known as 2P&G, GP or Pin Connectors, this type is the most commonly-used wiring device in the entertainment lighting industry. If you need a connector for your fixture in the theatre, most likely, you will need this type.

Edison This connector is also referred to as U-Ground or GR. This is the most common wiring device of all (being that it is used in every home and business in America). A NEMA type, it has applications in all areas of the electrical industry.

Twist-Lock Also called NEMA Locking, L5-20 and GTL, the prongs on these connectors are curved. As the name implies, once plugged together, it is twisted to lock the connector and prevent it from being unplugged. It is consistent with standards set forth by the National Electrical Manufacturers' Association (NEMA).

Cam-Type Used mostly by touring gigs and other events where large amounts of power are needed temporarily, Cam-Type connectors provide a quick and easy weathertight connection for feeder cable and power distribution.
